

a Dimension weights

b Normalized score calculation

Raw weighted sum

$$\begin{aligned} &= (\text{Nuc} \times 4) + (\text{Size} \times 1) + (\text{Novelty} \times 5) \\ &+ (\text{Structure} \times 3) + (\text{Domains} \times 2) + (\text{PPI} \times 3) \\ &+ \text{Cross-validation bonus} \end{aligned}$$

$$\text{Normalized score} = \text{Raw sum} / 1.83$$

Each dimension 0-10, cross-validation 0 to +3
Theoretical maximum 183, normalized to 0-100
